

## **BPM Solutions Portfolio:** Business Process Visibility Increases Productivity and Reduces Costs

### **About Netwoven**

Netwoven Inc. is a fast growing consulting and systems integration company intensely focused on helping customers gain competitive advantage by exploiting all forms of enterprise information. Led by business and technology experts, Netwoven has executed high impact programs and established a strong reference client base. Our solutions help customers achieve higher productivity, greater collaboration and deeper insight.

Netwoven's Business Process Management (BPM) Solutions improve departmental and industry-specific business process visibility and reporting to optimize process driven interactions between people. As a practice, BPM harnesses and optimizes human workflows throughout the enterprise – making sure each is integrated and monitored across all business units. Improved process visibility promptly identifies ways of optimizing an operational process – addressing bottlenecks, introducing escalations, and managing exceptions.

Process is pervasive to all businesses, large and small. By automating routine paper-based business processes, the best organizations have found a way to reduce overhead, improve productivity, increase customer satisfaction, or meet corporate compliance mandates. The most successful enterprises optimize their processes with the effective application of workflow technology. By making a manual process electronic, any organization can realize better visibility into process-driven activities.

Netwoven's specific BPM services include:

- **Functional Workflows:** Analysis, Design, implementation and optimization of horizontal processes in finance, operations, sales & marketing, and human resources
- **Industry Workflows:** Analysis, Design, implementation and optimization of vertical market specific processes in Industries served

The company's BPM Solutions follow a best practice approach that delivers immediate value. The entire business process is defined and mapped – ensuring that the designed workflow reaches all necessary internal or external constituencies, directories and databases. More global companies now require that departmental processes touch people, systems and processes at multiple points within the organization, across business units and distances, including internationally. To this end, business process efficiency is audited and reported at every step.

#### BUSINESS PROCESS MANAGEMENT OFFERINGS

- Functional Workflows
- Industry Workflows
- BPM Technology Services

## BPM Solutions Portfolio | PAGE 2

### Better Solutions on Leading Platforms

Besides utilization of market-leading products such as Microsoft Workflow Foundation, Netwoven is a leading solutions provider for the K2 Platform. K2 offers the leading BPM development products for Microsoft .NET, and Netwoven is proud to be one of its leading certified partners. Use of K2 helps Netwoven customers derive significant value from their Microsoft investments with scalable development, seamless integration, monitoring, and optimization capabilities.

Microsoft Windows Workflow Foundation is a workflow engine, programming model, and set of development tools for rapid deployment of workflow-enabled applications supporting both human and system workflow across client and server scenarios. Both of these enterprise workflow products enable our mutual customers to grow their productivity & profitability with processes that are modeled and implemented according to industry standards and best practices.

### BPM Technology Services

Our full range of BPM Technology Services cover the design and development of applications that employ Microsoft Workflow Foundation or K2.NET. We combine onsite functional experts with a large offshore development and maintenance team in India to create custom applications that meet any customer need.

### BPM Maintenance Services

Netwoven's BPM Solutions are never designed as a snapshot in time. Our seasoned technical experts realize that flexibility, scalability and extensibility mean that a customer's applications and infrastructure must evolve as the business changes and grows. We can handle ongoing enhancements, bug fixes, process and business rules extensions, form enhancements and additional reporting needs. BPM Maintenance Services ensure that our customer's solutions not only maintain relevancy but improve over time.

### BPM Expert Staffing

Our team of experts can help find the right contract candidates for your toughest BPM projects. We help you meet all your on-site staffing needs intelligently by selecting and interviewing the best fit and high quality for an available position. Netwoven can source experts to implement customized, complex workflows and integration with many enterprise systems leveraging Windows Workflow Foundation or K2.Net.

### People + Processes = Performance

Any organization can benefit from more efficient processes that save time and money while increasing productivity. Netwoven's BPM Solutions empower customers to continuously refine their own performance, while helping the business to more smartly utilize its human capital resources.
