Successful SharePoint implementations require appropriate governance for large and small sized companies to ensure that the use and growth of SharePoint is managed properly in organizations.

While organizations may believe that a standard set of policies apply to all organizations, every organization has unique needs and goals that will affect its approach to governance.

The process of establishing governance starts with a better understanding of the use of SharePoint in the organization. SharePoint in organizations is used for various purposes such as:

- Document Management
- Portal
- Public Site
- Collaboration
- Social Networking

Each of these requires different approach to governance.

Benefits of Governance

- Ensure compliance with corporate policies and procedures for content management
- Increase customer satisfaction of the use of technology and drive adoption
- Better manage the technical infrastructure for future upgrade purposes thereby reducing cost of managing the infrastructure

Netwoven's team of consultants are well versed with defining and establishing SharePoint governance for small and large organizations.
