

## About Netwoven

Netwoven is a leading consulting and systems integration firm singularly focused on helping clients get the most out of the rapidly exploding information in their enterprise – both structured information as well as unstructured information.

As experts in the area of information and collaboration management, Netwoven can organize and mine vast amounts of information in new, creative ways to tap employees' knowledge, mine competitive data, and create customer insights.

Netwoven's solutions in information and collaboration management result in higher quality decisions, reduced costs, enhanced teamwork, and better risk and compliance management.

Netwoven's scope of work includes:

- Portals and Collaboration
- Document management
- Records management
- Enterprise search
- Enterprise Social Networking
- Business Process Management
- Business intelligence

### Introduction

Netwoven's Business Intelligence (BI) consolidation service enables your organization to evaluate your BI strategy, reporting, and ETL tools to create an integrated environment that can save you licensing and maintenance costs.

Netwoven consultants are well versed in the area of Business Intelligence. They have worked with some of the world's largest organizations to help create their Business Intelligence strategy. Our team of consultants bring years of experience and knowledge to the various aspects of Business Intelligence including Organizational Competency, Reporting Tools selection, ETL Tools selection and design aspects of Business Intelligence.

### ETL Tools

Netwoven consultants have worked with SQL Server Integration Services (SSIS), Informatica and other leading ETL tools. Our team of consultants work with customers to help define and consolidate their ETL strategy resulting in licensing and maintenance savings. Netwoven provides the following deliverables:

- Review of ETL strategy, requirements and tools
- Recommendation of ETL tools based on requirements

### Reporting, Analysis and Dashboard Tools

Netwoven consultants have worked with reporting, analysis and dashboard tools from various companies including Cognos, Crystal Reports, Microsoft Reporting Services, Proclarity, and Business objects. Specifically, Netwoven provides the following deliverables:

- Review of reporting and analysis requirements
- Recommendation of reporting and analysis tools based on requirements

### Relational Databases

Netwoven consultants have strong experience with both Oracle and Microsoft databases. Our team of consultants are well versed in Data Warehousing Best Practices. They will work with your organization to help realize savings in licensing and maintenance costs by consolidating your relational databases. Specifically, Netwoven provides the following deliverables:

- Review of the data warehouse design and relational database needs
- Recommendation of the appropriate databases based on business and technical requirements

### OLAP Databases

Netwoven consultants have worked with various OLAP databases. Our team of consultants bring many years' experience to provide customers with OLAP Best Practices. They will work with your organization to help consolidate your OLAP databases. Netwoven provides the following deliverables:

- Review of the OLAP requirements
- Recommendation of appropriate OLAP databases based on requirements
