Netwoven Content Migration Service

Introduction

Netwoven's Content Migration Service enables your organization to use SharePoint 2007 for managing published documents in an integrated repository.

Netwoven consultants can work with you to consolidate your repositories into a single repository. Our team of experts is well versed in migrating content from other repositories such as Network File Shares, Documentum, Lotus Notes, Livelink, Exchange Public Folders, eRoom and Hummingbird.

Netwoven can also work with your organization to create a heterogeneous environment with various repositories to create an integrated experience.

Our team of experts has worked with some of the world's largest organizations to create an integrated Content Migration service that allows organizations to save costs by integrating their document repositories through reduced licensing fees and consolidation of support costs. These repositories have ranged from few gigabytes to a few terabytes in size supporting some of the largest SharePoint implementations.

Key Migration Challenges

When consolidating repositories, there are several considerations that have to be made in various areas. These include:

- Meta data management
- Security management
- Target repository structure
- Search considerations
- Merge and split considerations
- Version Management

Solution Components

Netwoven's solution consists of several components. These include:

- Document repository – This includes an appropriate structure in SharePoint to manage the content
- Contribution Application – This includes a set of forms and workflows to enable users to contribute content
- Taxonomy Manager – This component provides the ability to manage the meta data appropriately for the target repository
- Search – This component enables users to find content based on the taxonomy
- Security Framework – This component enables the repository to support an organization's security requirements.
