

Security Assessment Workshops

Issue Date: December 14, 2021

How secure do you think your company's critical data is?

88% of organizations no longer have the confidence to detect and prevent loss of sensitive data

>80% of corporate data is 'dark' – it's not classified, protected, or governed

\$3,000 is all it takes to buy administrator access to corporate domains in the Dark Web- Digital Shadow study, 2020

58% of workers accidentally share data with the wrong person

Manage your data

Managing data is no longer just about dealing with documents and emails. Pervasive digital technology and the rapid shift to remote work have greatly expanded the information universe. Much of that data becomes obsolete or unused immediately after creation but can contain information that could impose a compliance risk. New threats to data security are surfacing every day and a strong cybersecurity management system is the means to control user accesses to reduce the risk of external and internal data security breaches.

Improve your organization's security posture with our Microsoft Security Workshops

Today's organizations manage large volumes of data and alerts with vulnerable legacy systems. In this environment, minimizing security risks becomes a huge challenge. We help you identify current and real threats and achieve your broader security objectives with our Microsoft Security Assessment Workshops. Designed for today's security stakeholders and customized specifically for your organizational needs, these workshops will help you develop a strategic plan based on the recommendations of our cyber-security experts. Along with gaining visibility into immediate threats across email, identity, data, and compliance, you also get the much-needed clarity and support on how to upgrade your security posture for the long term.

Our Solution Showcase consists of workshops that are designed to advance your Organization's Security strategy while helping you in your Digital transformation journey.

Why You Should Attend Our Microsoft Security Assessment Workshops

Given the complexity and volume of data, applications, identities, devices, and infrastructure, it is critical to know the current security landscape of your organization, and how to mitigate and protect against threats going forward. By attending our workshops, you will be able to:

- ✓ identify current and ongoing risks to your environment
- ✓ understand better how to accelerate your security journey using the latest tools
- ✓ understand the actionable next steps based on your specific organizational needs and objectives
- ✓ document your security strategy for the benefit of key stakeholders

Microsoft recognized Netwoven for extending the capabilities of Microsoft Information Protection (MIP) suite
